Beauty that changes with time

Among Union's products, brass products are the flagship of the company's high-end lineup. Brass is the only metal with a gold-colored base among construction materials, and is a versatile material that can be processed in a variety of ways. The way it changes its color to an antique color along with the architecture as it is used is enough to imagine the history and story of the architecture. We propose a handle that expresses an even deeper flavor by applying lacquer on top of the brass. The Miku Lacquer Craft, which uses a special and unusual technique among Japanese lacquer craftsmen to spray lacquer, which is harmful to the human body, with an air gun, is a fusion of a traditional technique that has been used since 1655 and lacquer applied by craftsmen who have studied materials to fix the lacquer to all kinds of materials. The lacquer used to protect wooden vessels has been used to protect metal over time, and to enjoy the way it ages along with the architecture, an uneven surface was created and an arched design reminiscent of swords, torii gates, bridges, etc. was created to feel the genes of Japanese lacquer craft.

Custom made

RG1202 -Kurotsuchi- 渥

The natural lacquer produced in Fukui Prefecture, Japan, is used.

The base is made of brass castings using the same casting technique used for Japan' s Great Buddha and other sculptures.

wooden patterns can be carved using the same technique as for casting molds.

Material	Brass , Aluminium						
Finish	Black,Brown,Red,Solid BlackBrass Gold,Aluminium Silver						
Length	L=730						
Shell Color	Brown Urushi 	Black Urushi 	Red 	Solid Black 	Brass Paint less 	Aluminium Paint less 	Wood Paint less 
etc	Combination W Color Anodized Aluminum ,Oxidized Brass						
Caution	Due to the sun' s rays causing variations in color perception, it is advisable to avoid direct exposure to sunlight. The base brass portion will gradually transition from gold to an antique patina as it is used over time. Enjoy the changes that occur with age.
